Introduction

This book is intended to do nothing other than make you think. I want you to think for yourself. If you do not want to think for yourself, then you may as well quit reading right now. I do not want to waste your time. The statements made in this book are solely my opinion, coming from my heart. If you continue, it will require an open mind. It will require that you explore “outside the box.” I challenge you to give all of your present beliefs the real “litmus test.” What do you have to lose? After all, if your dearly held beliefs are solid, they will hold up under the “litmus test,” right? Then you can simply go on believing as you have, knowing you were right all along. On the other hand, if they fail the “litmus test,” then you owe it to yourself to get to the real truth. Know the truth and the truth will make you free. Don’t blindly believe what I say, but rather, look inside your heart and hear what it has to say. You have no need to look without, because all you need to know is within.

“It is discouraging to think how many people are shocked by honesty and how few by deceit.” Noel Coward

I am going to introduce you to some ideas that you may never have before considered. I do not force them on you, I am only putting them out there for you to consider. If you are opposed to new thoughts or ideas, this may not be of interest to you. I cannot tell you what to believe and what not to believe, nor can I command you to have an open mind. Your personal revelations must come to you in your own good time, not mine. However, it is my desire that you do open your mind and think for yourself beyond the boundaries that have been deceitfully laid out for you. It is my desire that every man, woman and child learn the truth, as the truth will make you free. With freedom comes a multitude of other qualities, each being the natural desires for human beings. Freedom, happiness, abundance, love, joy and peace are natural and desirable for all. Slavery, sorrow, fear, lack and war are not.

If you truly want freedom, you must know the truth. In order to know the truth, you must examine every aspect of your foundation with meticulous and unbiased scrutiny. After doing so, anything that does not ring true in your heart, must be set aside as unreliable. Remember, there is not one aspect of your belief system that is exempt from deception. Not one. Freedom follows truth, not tradition or popular opinion. Preconceived ideas do not equal truth, but rather, serve to
inhibit truth. “Condemnation without investigation is the height of ignorance.” Albert Einstein

I do not claim to have all the answers. This book represents my own personal growth that has come from my research over the past 15 years. My perspectives and beliefs are in a constant state of change, as new and better information comes to light. Although I have attempted to put forth only my latest positions in order to avoid possible conflicting statements, the observant reader may detect some of these changes, as this work was compiled over a period of several years.

This book is written in a manner that lays out a particular idea and then returns to it later for further or deeper consideration. This way it gives the reader not only a reminder of what has been covered, but a different perspective or angle from which to examine the topic. What may seem redundant at times is in reality, cumulative imagery, purposely done to help you remember, to learn and to think.

I make use of analogies in order to get my point across in a manner that anyone can comprehend. I also make use of many quotes from various visionaries of both the past and present. Some statements are so well worded that it is impossible to improve upon them.

Along my journey of life, I have encountered and learned many things. Some were hard knocks stemming from bad choices. Others were profound life changing discoveries and realizations. I have learned to love all people, hold no grudge and forgive any and all. I ask only the same in return.

As I extend this invitation to think, it is my hope that you will find my approach thought provoking, interesting and useful in setting yourself free. You may not embrace this kind of thinking right off, and that’s okay. Every paradigm shift begins with a small crack and that lets in some light with which to grow.

From my heart to yours,

Greg
